FULLSTACK TYPESCRIPT WEB DEVELOPER

Cristaldo Mariela.

OBJECTIVE

I really want to live the adventure of being a software developer so I can continue growing up on this, I need the real-world experience so I would be so grateful if given me the opportunity.

ABOUT ME

API REST development using **NestJs** as my framework, I do things like cruds, image uploading, usage of **TypeOrm** for the database management, Guards for the permission management, Authorization by role, User authentication through jwt, the app it's organized by modules.

Frontend development by Angular, responsive design, pagination, lazy loading, I can use **sass** written only by me or using **angular material**.
PostgreSQL usage as database, manager of entity relationship model or ER and obviously SQL queries.

I **work under pressure**, not haven't jet experience on software, but I work a lot of years on production areas like books or clothes, so I could say I'm the most **responsible** person I know.

I want to mention that my English was learned by watching tv and listen to music on Spotify.
